

# Ertispread S 1550 SG

Rev. date 13/11/2019

## Hardstock for chocolate spread

The typical chocospreads are made with blends of palm oil + liquid oil, or are based mainly on super olein, but they show risks of recrystallization and tend to oil out.

Fuji Oil Europe has developed **Ertispread S 1550 SG** as hardstock for chocospreads that can be blended with super olein or liquid oil:

- ✓ Improved stability of the spread during storage:
  - no re-crystallisation (no graining)
  - improved resistance to oiling out
  - stable texture
- ✓ Less critical cooling process
- ✓ Very good consistency and spreadability
- ✓ Nice melting behaviour
- ✓ Based on palm, RSPO segregated fats

The recommended dosage of **Ertispread S 1550 SG** for chocospread with 13% hazelnut paste and 20-25% vegetable fat are:
